Skills

- Python
- SQL
- Microsoft Excel
- Power BI
- Git

Language

- Sesotho
- English
- isiXhosa

Professional Profile

BCom Computer Science & Information Systems graduate with a strong foundation in data analysis, software development, information systems and business technology solutions. Hands-on experience using Python, SQL, Power BI and Microsoft Excel to analyze data, develop interactive dashboards and build practical applications. Developed projects involving HR analytics, sales analysis and fraud detection, with experience transforming raw data into structured insights and business-focused visualizations. Strong problem-solving, communication and technical skills with a continuous-learning mindset.

Education

BCom Computer Science & Information Systems — *Apr 2026*

Nelson Mandela University — Gqeberha, South Africa

Overall Average: 65%

Relevant Coursework: Programming Fundamentals • Advanced Programming • Data Structures & Algorithms • Database Systems • Information Systems • Management Information Systems • Business Process Modeling • Web Systems • Business Statistics • User Interface Design

Experience

Student Assistant — Computing Sciences — *Mar 2023 – Jun 2023*

Nelson Mandela University — Gqeberha, South Africa

- Assisted lecturers with the preparation of teaching and learning materials for Computing Sciences modules.
- Supported students with Microsoft Excel, Word, Access and C# fundamental concepts, helping them understand and apply core technical and computer application skills.
- Assisted with marking student assessments, supporting accurate and consistent assessment processes.

LEADERSHIP

Student Leader — *Jan 2025 – Oct 2025*

METROREZ Student Accommodation — Gqeberha, South Africa

- Analyzed student intake data using Microsoft Excel to improve reporting accuracy and support operational decision-making.
- Cleaned and structured datasets to improve data consistency, usability and reporting quality.
- Created visual reports and dashboards to communicate student-related insights to management.
- Identified patterns in student data to support accommodation planning and operational decisions.

Projects

Fraud Detection System | Python

GitHub: github.com/GLPule/Python/tree/main/fraud_detection_system

- Developed a machine learning application to classify bank transactions as fraudulent or legitimate.
- Built a Streamlit interface that allows users to enter transaction details and generate fraud predictions.
- Integrated a trained Scikit-learn pipeline using transaction amount, transaction type and account balance features.
- Applied Python and machine-learning concepts to a financial fraud detection use case.

HR Analytics Dashboard | Power BI

GitHub: github.com/GLPule/Power_BI/tree/main/HR_analytics

- Developed an interactive Power BI dashboard using 1,480 employee records across 37 fields.
- Analyzed employee attrition, demographics, departments, job roles, salary bands, job satisfaction and work experience.
- Built KPI metrics covering total employees, active employees, attrition count, attrition rate, average age and average employee experience.
- Identified an overall 16.3% employee attrition rate and analyzed turnover patterns across department, gender, age, salary, job role and experience.
- Created interactive visualizations and filters to support workforce analysis and communicate insights effectively.

Coffee Sales Analysis | Excel

GitHub: github.com/GLPule/Excel/tree/main/coffee_sales_analysis

- Analyzed 1,000+ transaction records to identify sales trends, customer behavior, product performance and geographic patterns.
- Integrated and prepared orders, customer and product datasets using Microsoft Excel for structured analysis.
- Developed an interactive Excel dashboard to monitor sales by time period, country and customer.
- Applied PivotTables, formulas, charts and data visualization to transform raw data into business insights.

Python Projects

GitHub: github.com/GLPule/python-projects

- Developed 5+ Python applications demonstrating programming fundamentals and practical problem-solving.
- Applied user input validation, functions, loops, conditional logic, exception handling and modular programming.
- Used Python libraries including random, qrcode and CurrencyConverter to build interactive applications.
- Managed source code and project documentation using Git and GitHub.

Professional Development

WeThinkCode_GenAI Course for Software Engineers

May 2026

- Learned prompt engineering and generative AI tools.
- Explored applications of generative AI in software development.

FNB Academy

2026 - Present

- Phase 1 focused on digital skills and entrepreneurship fundamentals.
- Currently completing Phase 2: App Development & Practical Coding Skills.
